NORTHSTAR COMMERCE

Product Catalogue & Product Guide

KNOWLEDGE BASE DOCUMENT
Product descriptions, selection guidance, care, limitations and source-of-truth rules.

Document purpose

This document is fictional sample content created for testing a retrieval-augmented generation (RAG) application. Northstar Commerce is not a real retailer. Review and replace all demo information before using this material in a real business.

1. How to Use This Product Guide

This guide contains illustrative descriptions for products in the Northstar Commerce demo catalogue. It is intended for semantic retrieval tests and general product questions, not as a replacement for verified manufacturer specifications.

Authoritative data

- Use PostgreSQL for live product names, prices and stock quantities.
- Use this PDF for general descriptions, selection advice and care guidance.
- Confirm specific dimensions, sizes, compatibility, included accessories and warranty terms against a verified listing.
- Do not infer technical performance from a product name alone.

2. Clothing

Blue Cotton Shirt

A versatile cotton shirt intended for everyday wear. It can be styled with jeans or chinos. Customers should consult the garment label for washing temperature, drying and ironing instructions. Exact fit, fabric composition and available sizes should come from the product listing.

Black Jeans

Classic denim intended for casual outfits. Washing inside out with similar colours may help preserve the finish. The precise cut, stretch content, inseam and size range must be checked on the listing.

White T-Shirt

A basic layer for casual wear. Follow the garment label and separate whites from strongly coloured items when appropriate. Do not assume a particular fabric weight or fit without verified details.

Denim Jacket

A casual outer layer suitable for mild weather. Check care instructions before washing, and avoid high-heat drying if the label advises against it. Exact lining, closure and pocket details should be confirmed from the listing.

Hoodie

A comfortable casual layer described as fleece-style in this demo. Follow the care label to protect the fabric. Do not promise thermal performance or a particular blend unless product specifications confirm it.

3. Electronics

Wireless Headphones

Designed for listening without a wired audio connection. Pairing steps, battery life, microphone capability, noise cancellation, supported codecs and charging details vary by model and must be verified from the product listing or manual. Keep the device dry unless a verified rating states otherwise.

Smart Watch

A wearable device category commonly used for timekeeping and fitness tracking. Phone compatibility, sensors, supported apps, battery life and water resistance vary by model. Do not present any health measurement as a medical diagnosis.

USB-C Charger

A charger using a USB-C connection. Connector shape alone does not guarantee charging speed or compatibility. Check the supported power output, cable requirements and device compatibility before use.

Bluetooth Speaker

A portable speaker category for wireless audio playback. Pair it using the manufacturer's instructions. Battery capacity, sound output, microphone features and water resistance must be verified for the exact model.

Wireless Mouse

A computer pointing device that connects wirelessly. Confirm operating-system compatibility, connection method, battery or charging requirements, and included receiver details from the listing.

4. Footwear

Running Shoes

Intended for running and active use. A comfortable fit should provide suitable toe room and heel stability. Terrain, gait, cushioning and support needs vary by person; do not promise injury prevention.

Casual Sneakers

Everyday footwear for casual outfits. Customers should consult the size guide and follow care guidance appropriate to the shoe's materials. Do not assume the shoes are suitable for specialized sports.

Leather Sandals

Open footwear for casual use. Prolonged moisture and direct heat can affect leather. Confirm sizing, sole material and care instructions from the product listing.

Sports Shoes

Footwear intended for training or sports activities. The best choice depends on the activity and fit. Confirm the specific sport suitability and construction details before recommending them for specialized use.

5. Accessories

Leather Wallet

A compact accessory for carrying everyday essentials. Avoid prolonged exposure to moisture and heat. Confirm dimensions, compartments and material details from the listing.

Travel Backpack

A bag intended for travel or daily carry. Confirm dimensions, capacity, laptop compartment size and water-resistance claims before purchase; these details can vary by model.

Sunglasses

An eyewear accessory. UV protection must be confirmed from a verified label or specification; do not infer protection from lens darkness or appearance. Customers who need optical advice should consult a qualified professional.

Wrist Watch

A classic timekeeping accessory. Water resistance, strap material, movement type and maintenance requirements vary by model. Do not promise suitability for swimming or diving without a verified rating.

Leather Belt

An adjustable clothing accessory. Customers should consult the size guide for suitable length and fit. Store away from prolonged moisture and follow care guidance for the actual material.

Laptop Sleeve

A protective sleeve category for carrying a laptop. Confirm internal dimensions and device compatibility before purchase. Do not assume impact protection or water resistance unless specified.

6. Product Selection and Comparisons

Clothing and footwear

Ask which fit, activity or use case matters to the customer. Consult the verified size guide rather than guessing. If a size or dimension is absent from the source, say it is not specified.

Electronics

Ask about the customer's device and intended use, then verify compatibility and technical specifications. Do not invent battery life, range, wattage, operating-system support or other numerical claims.

Accessories

Confirm measurements, materials and intended use from the listing. A general category description is not sufficient to guarantee a particular capacity, fit or level of protection.

Comparing products

Compare only attributes available in reliable sources. If the documents do not provide a relevant attribute, explain that the information is unavailable rather than assuming one product is better.

7. Warranty, Defects and Returns

This guide does not define a universal warranty period. Warranty coverage, exclusions and claim procedures must come from verified product terms or the official warranty documentation.

Defective or damaged products

- Ask the customer to follow the official support process and provide the order reference.
- Do not promise replacement, repair or refund approval before review.
- Use the company policy document for return eligibility and refund timing.
- Do not advise unsafe repair of electronic products or modification of charging equipment.

Descriptions in this guide are illustrative. Product claims must be checked against the current verified listing and manufacturer documentation before use in a real store.

8. RAG Assistant Rules for Product Questions

Choose the correct source

- For price and availability, query PostgreSQL.
- For current inventory, query the inventory table.
- For product descriptions and general selection guidance, retrieve this guide.
- For return and refund conditions, retrieve the company/customer guide.
- For order status, use an authorized order lookup rather than either PDF.

If a retrieved passage does not answer the question, the assistant should be transparent about the limitation and seek a verified source or human assistance.

Demo content only. Confirm all claims, contact details, terms and specifications before real-world use.
